

Product Comparison

Internal Probes

- The Migun products are designed for a superior therapeutic result.
- Other competitive products emphasize comfort over therapy.

	Migun	Competitors	Dujon	Cerastone
	5 jade capsules	Rollers	Rollers	Rollers
Shape				
	Applies deeper penetration to the acupuncture points	Rolls over the acupuncture points. Less discomfort but also less therapeutic results.		
	Migun	Competitor	Dujon	Cerastone
Range of motion	Between two scapulas	Rolls over two scapulas	Rolls over two scapulas	Rolls over two scapulas
	Designed for safety	Can lead to a scapula injury

Probes

Patents

- Migun's advanced technology, protected by the international patent law, is designed to penetrate the precise acupuncture points.
- It embodies the exact same principles of the Traditional Chinese Medicine.

	The probe arrangements
Migun	<ul style="list-style-type: none"> • Designed to stimulate and penetrate the acupuncture points along the Urinary Bladder Meridians. • Principal design used since 1988. It has never been altered. • Impossible to replicate. Protected by the Patent Laws.
Competitors	<ul style="list-style-type: none"> • Variation/imitation from the Migun's five jade head capsules. Originally tried to use the capsules instead of the rollers. • Prone to injury due to its scapula encroachment. • The increase in number and its range of motion are not supported by the clinical studies.

Migun thermo-mechanical probes

Identical to TCM practice

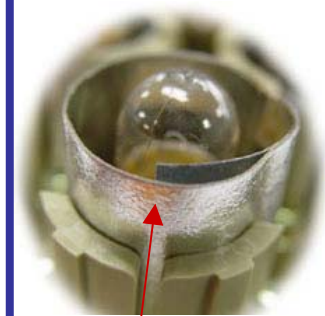

Heat/FIR distribution

	Heat/Far Infrared Ray (FIR) distribution
Migun	<ul style="list-style-type: none">Heat protecting plates/ rubber washers reduce the loss of heat. An oval design centers heat/FIR penetration to the surface.
Competitors	<ul style="list-style-type: none">No heat outlet. The placement of its light bulbs is not directed towards the surface.Inconsistent Heat/FIR distribution

Jade Capsules

Heat protecting plate

Rubber washer

Jade capsules

Holes/Heat outlet
(oxygenation for deeper penetration)

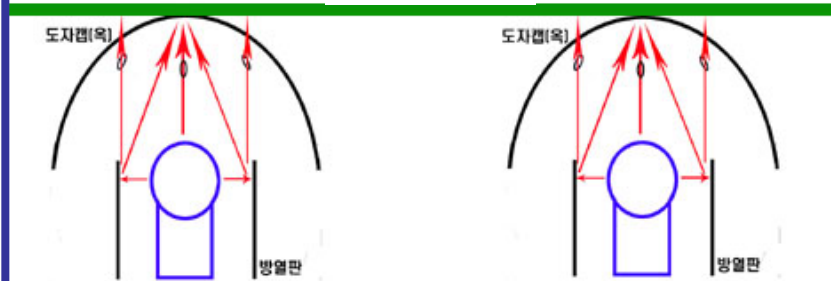

Heat/FIR vs. surface

	Heat/FIR concentration
Migun	<ul style="list-style-type: none"> The convex jade caps allow better heat concentration The helium light bulbs are position towards the surface
Competitors	<ul style="list-style-type: none"> The light bulbs are position away from the surface which results in uneven FIR distribution

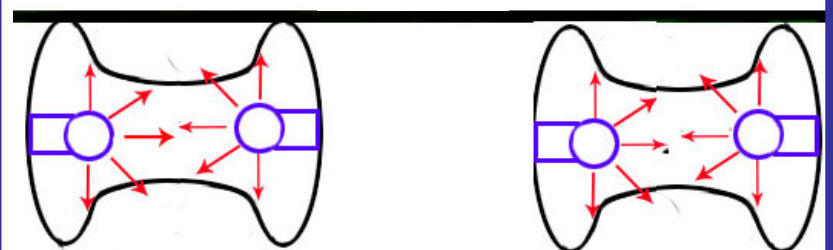

Migun Jade Caps/Light bulbs

Surface

Company C probes

Surface

AC/DC

	Electrical shock
Migun	<ul style="list-style-type: none">• Uses 120V AC voltage and converts into safer DC voltage for both main probes and outside projector. This minimizes the chance for any possible electrical shock.
Competitors	<ul style="list-style-type: none">• They use 110V AC voltage for and converts into DC voltage only for the outside projectors. The main body is prone to electrical shock if it gets wet.

PWM vs. Time Control

	Electrical shock
Migun	<ul style="list-style-type: none">Migun uses pulse width modulation (PWM) to measure its exact time and width of the operation. This regulates Migun probes to start from the top and apply force at the exact acupuncture points. The technology and its production cost is much higher to incorporate.
Competitors	<ul style="list-style-type: none">Others use the timing control method. If the session ends before its entirety, the acupressure treatment for the next session will differ. Starts from a different starting point and results in random stopping.

Features

- HY 7000 has 7 different modes including the manual mode.

	프로그램 개발
미 건	<div>6개의 자동프로그램</div> <ul style="list-style-type: none">• P1: Full body massage (long)• P2: Dorsal massage• P3: Lumbar massage• P4: Acupressure massage• P5: Full body massage (short)• P6: Abdominal massage
유사업체	<ul style="list-style-type: none">• Most competitors have 1 auto/1 manual mode
